## Prepared by D. El-Hoss

## The Final Capital Account

The effect of drawings and net profit/loss on the final capital account
It has been established that the amount of the owners net worth at the end a financial year can be deduced using the following equation:

## New Capital = Old Capital + Net Profit - Drawings

Or

> New Capital = Old Capital - Net Loss - Drawings

At the end of the financial year the new capital figure is also calculated within the double-entry system in the following way:

B Shift
Trading and Profit and Loss Account for the year ended 31 ${ }^{\text {st }}$ December 20X5
